<b>D</b> 15" BRT Hi-Hats		<b>K</b> 14" LTD Hi-Hats		

### Super-Size BRT Series

Bigger, bolder and brighter, the BRT Series has been expanded with a 24" Ride, 21" and 22" Crashes and 15" Hi-Hats. These over-sized models provide the extra power and projection that are often required for today's high-volume, high-intensity rock/metal situations.

### DRK/BRT Hi-Hats

New DRK/BRT Hi-Hats match a BRT top with a DRK bottom hi-hat cymbal to produce a crisper, cleaner closed hi-hat sound plus a wider frequency spectrum for sizzling, explosive open and half-open sounds. Available in 13", 14" and 15" models.

### MDM Series China-Splashes

Used individually or in two and three-piece sets, new 9", 10" and 11" MDM China-Splashes offer a distinctive, short, trashy sound that's appropriate in a variety of contemporary applications.

### DRK Series Flat-Rides

The deep, mellow DRK Series now includes the classic, extra-dry sound of 18", 20" and 22" Flat-Rides. Great for everything from traditional and progressive Jazz to World Music and other old-school and new-school musical styles.

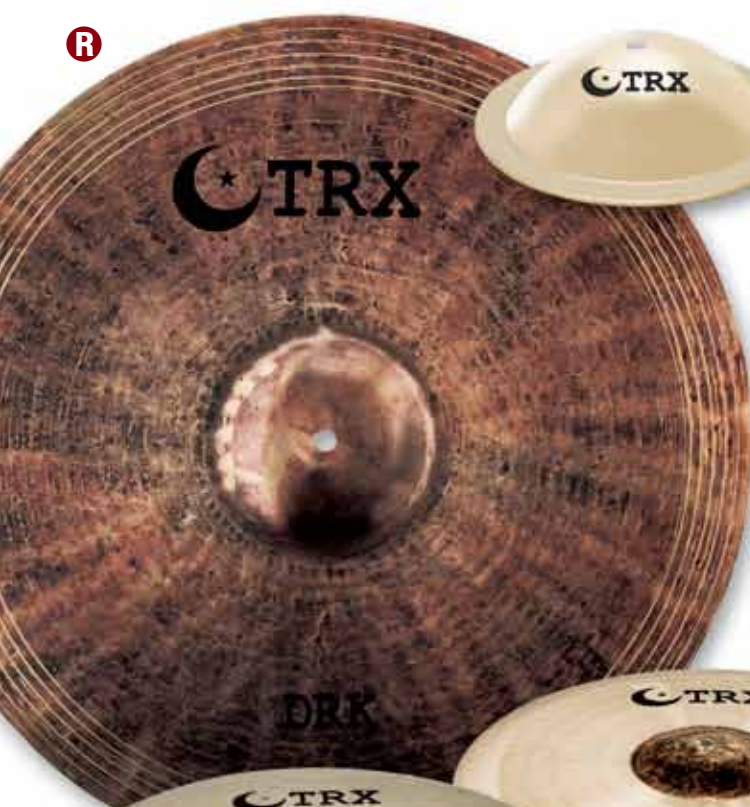

### LTD Series

TRX's exclusive LTD Series employs three different types of finishes in three different areas of the cymbal— natural bell, lathed and hammered face and highly-polished edge. This triple-zone, multi-purpose design provides an extraordinary combination of

articulation and detonation that's designed to meet the needs of modern Rock, Pop, Punk and Metal drumming. The LTD Series features 18", 20" and 21" Crash-Rides and 14" Hi-Hats.

	S 7" T-Bell	U 21" BRT Big-Bell Ride	W 16" DRK/BRT Hi-Hats	Y 16" Grille
				Z 20" Grille

### T-Bells

The 7" and 9" TRX T-Bells are extra-heavy bronze bells with a mirror-like finish that feature a sharp attack, a clear, penetrating tone and a long sustain. The instruments can be used in a variety of musical situations and are popular with progressive, alternative, hardcore and metal drummers.

### Big-Bell Rides

TRX' two new 21" Big-Bell ride cymbals feature larger, more prominent bells that provide a high-pitched, penetrating bell area while also creating greater definition from the ride area. The two models offer a choice of performance characteristics for Latin and Rock (ALT) or Metal (BRT) applications.

### Grilles

More than a crash but less than a china, Grilles have a trashy sound that stands out from other cymbals without overpowering them. The cymbals are MDM Series crashes with a brilliant finish and precision cut vents in the shape of the letters that make up the TRX logo.

# Young Turks.

## DRK Series

Ultra-thin and cast from our ageless and versatile B20-Plus bronze formula, the TRX DRK Series is known for its dark, earthy, old-skool sound. And, in addition to its balanced blend of depth and warmth, the line's classic tonal tendencies are further enhanced by a distinctive low-profile design and an unlathed, natural finish as well as an exclusive pre-aging process and extra-deep hand-hammering by our master cymbalsmiths.

## MDM Series

Medium weight with traditional-style lathing, buffing and hammering, the TRX MDM Series is an all-purpose line developed to meet a diversity of contemporary musical needs. MDM cymbals provide exceptional sound and performance in a variety of general drumming applications—bringing the superior quality, consistency and individuality of handcrafted Turkish cymbals to today's young but discriminating drummers.

## ALT Series

Incorporating thicker, heavier castings, a raw bell and a micro-lathed playing surface with multi-level hammering, the TRX ALT Series is a new standard of sound for a new generation of drummers. But ALT Series cymbals are not just stronger, brighter and more responsive than conventional midrange cymbals—they have been carefully designed and custom-crafted to offer drummers an all-around alternative for today's more aggressive modern and mainstream styles.

## BRT Series

Extra heavy with a brilliantly polished, unlathed playing surface, the TRX BRT Series has a focused, high-frequency spectrum and an intense, powerful sound. However, even though it provides increased presence and projection in high-volume, high-energy drumming situations, due to the rich, multi-faceted tone of our B20-Plus alloy and the skillful hands of our expert cymbalsmiths, the BRT Series is also extremely versatile and incredibly musical.
